

# Help Your Watershed

A watershed is land that drains rain and snow to a stream, lake, wetland, bay, or the ocean. Here are things you can do every day to help stop pollution in your watershed.

*Save water.* Every drop you save means more water for fish, wildlife, and plants.

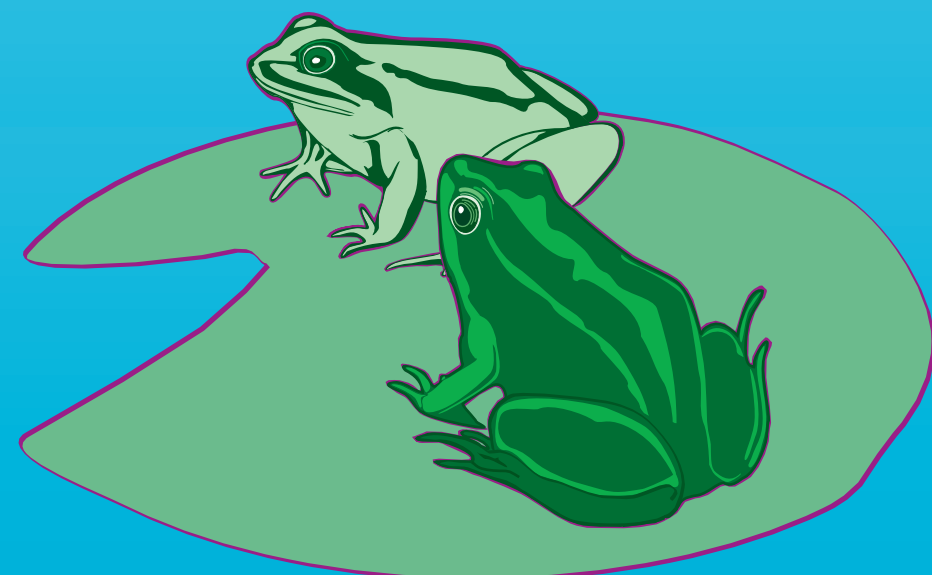

*Take a hike, ride a bike.* Get around using kid power if you can.

*Clean it up.* Trash and dog waste in the street can wash into our waters and hurt the creatures that live there.

*Read the label.* Ask your parents to use less toxic household and yard products.

*Get involved!* Learn about your watershed and share what you've learned with others.

"Clean water is important for everyone, and you can help protect it!"

President Bush

EPA Administrator Whitman
